

iMFLUX Times

December, 2019

iMFLUX education continues to expand throughout the industry, including at the university level. **The Green Curve** will now be a known technology to all students entering the workforce. On Wednesday, November 20, 2019, students at Shawnee State University were educated about the **iMFLUX** technology at the university level for the first time. Students are now learning about **iMFLUX** both in the classroom and in the lab, receiving hands-on **iMFLUX** training and the opportunity to complete projects using the **iMFLUX** technology. Additional university partnerships are in the works including **Ferris State University, U Mass Lowell, Pittsburg State University of Kansas, and Penn State Behrend**. Thank you to **Shawnee State** for being **FAST and FIRST!**
